OGIP Memo OGIP/93-013 (Missions, Instruments, Filters, Detectors & Gratings)

OGIP Memo OGIP/93-013

Standard Strings for Mission, Instrument, Filter, Detector & Grating Names for OGIP FITS files

Ian M George Lorella Angelini & Michael F. Corcoran Code 662, NASA/GSFC, Greenbelt, MD 20771

Version: 2012 Oct 10

SUMMARY

We give a list of standard character strings used within the OGIP for the specification of the Mission, Instrument, Filter, Detector & Grating in use.

1 INTRODUCTION

In order to facilitate interpretation of archived FITS datasets by software and users, the Office of Guest Investigator Programs (OGIP) at NASA/GSFC and the High Energy Astrophysics Science Archive Research Center (HEASARC) FITS Working Group (OFWG) have adopted a standard set of FITS header keywords and keyword values to be used to uniquely specify the Mission, Instrument and Detector to which the dataset refers, and to specify any Filter and/or Grating in use. This memo lists those currently in use.

1.1 FITS Keywords

The following FITS keywords are used to provide information regarding the provenance of the dataset:

FITS Keyword	Meaning	Reference
TELESCOP	observatory or mission; for space science, usually refers to the	NOST Standard
	spacecraft on which various instruments are mounted	
INSTRUME	refers to a particular instrument system contained on	NOST Standard
	TELESCOP	
DETNAM	identifies the detector subsystem (for example, the CCD chip	this document
	in an array)	
FILTER	identifies the filter in front of the particular instrument or	this document
	detector	
GRATING	identifies the particular grating which may be interposed in	this document
	the optical path	

 Table 1: FITS Identification Keywords

In the table above, the NASA Office of Science and Technology (NOST) Standard is the "Definition of the Flexible Image Transport System (FITS)", March 29, 1999 (NOST 100-2.0).

1.2 Design Criteria

During the development of these standard strings we decided **against** deriving a standard-recipe (set of rules) for specifying all the necessary information for all missions, instruments *etc.* This decision was primarily based on the great variety of instrumentation handled by the OGIP. Instead we considered it preferable to define the **minimum** number of unique strings which served the purpose of identificaton, and wherever possible adopting the strings in common use by instrument teams & scientists.

Values already in widespread use for the mandatory FITS keywords **TELESCOP** and **INSTRUME** also influenced our decision in some cases.

In almost all cases, the <u>Mission</u> and <u>Filter</u> strings are fairly obvious (& uncontroversial), thus are straightforward to define. It is likely that these strings will most often be used as the values of the TELESCOP & FILTER keywords in FITS files.

The character strings adopted for the specification of the instrument/detector/grating (and, where necessary, <u>sub-detector</u>) are naturally highly instrument-specific. These strings will most often be used as the values of the INSTRUME & DETNAM or INSTRUME & GRATING keywords in FITS files.

It should be noted that many of the strings specified in the following sections are provided solely to enable calibration datasets to be fully specified.

1.3 Case-Sensitivity

All the strings listed in the following sections should be considered **case-sensitive**. However, reliance on case to distinguish different values of TELESCOP, INSTRUME, DETNAM, FILTER or GRATING is deprecated.

1.4 Specification of multiple instruments & detectors

Under certain circumstances it may be desirable to combine data from different instruments and/or different parts (sub-detectors) of a given instrument together in a single FITS dataset (eg. combining ASCA GIS2 and GIS3 datasets, combining the Argon layers of detector modules DET-A and DET-B for the *EXOSAT* ME). It is crucial that the INSTRUME and/or DETNAM keywords reflect such combinations, to inform the user and reduction or analysis software.

There are two ways in which such combinations are specified via the INSTRUME and/orDETNAM keywords:

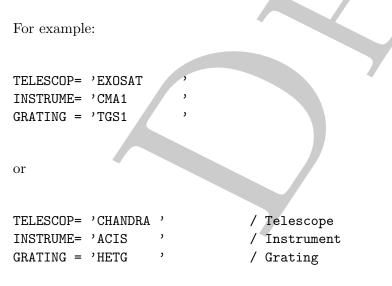

- 1. Certain common combinations are given their own unique values For example:
 - For the EXOSAT ME INSTRUME= 'ME ', DETNAM = 'QUADj XX' is used to denote that quadrant j of the 8 ME modules have been combined (with j=1 representing DET-A + DET-B, j=2 representing DET-C + DET-D etc).
- 2. The INSTRUME and/or DETNAM keyword strings for less common combinations are constructed using the standard strings listed in this document separated by a comma (,). For example:

• For a combination of the two *ASCA* GIS experiments INSTRUME= 'GIS2,GIS3'

1.5 Filters/Gratings in the Optical Path

Some instrument/detector combinations can operate in conjunction with a filter or grating inserted into the optical path. Often the usage of such a grating is optional, and observations can also be carried out using the detector without the grating in place. In the past, the instrument/grating combination has often been referred to as a 'separate' instrument. For example, data taken when the moveable transmission grating was in the optical path of one of the two low energy telescopes on EXOSAT was commonly referred to as being obtained from the 'EXOSAT TGS1' or 'EXOSAT TGS2' instrument. However, this procedure is strongly discouraged since if different gratings could be associated with the same or different focal plane instruments, different acronyms would need to be defined for each instrument/grating combination.

Instead, the OGIP recommends that the focal plane instrument be specified by the INSTRUME keyword, and that the filter or grating be specified by the the FILTER or GRATING keywords, respectively.

1.6 Contacts

Please send any comments or suggestions to the General HEASARC Feedback mailing list from the HEASARC Feedback page, http://heasarc.gsfc.nasa.gov/cgi-bin/Feedback

		LWP ^a		Long Wavelength Prime Camera
		LWR^a		Long Wavelength Re- dundant Camera
		SWP^a		Short Wavelength Prime Camera
		SWR^a		Short Wavelength Re- dundant Camera
Nuclear Spectroscopic	NUSTAR	FPM		Focal Plane Monitor
Telescope Array				
		FPMx,x=A,B	DET:	
	~		DETi	

 a Focal plane Instrument

^bOptical path might include a grating; see Table 2.3 ^cOptical path might include a filter; see Table 3

		,	,	
Observatory Name	TELESCOP	INSTRUME	DETNAM	Comments
Orbiting Solar Observatory #8	OSO-8, OSO-I	UVS		High-resolution UV spectromter
		MUVS		Multichannel UV & visible spectrometer
		CGCS		Columbia Grating Crystal spectrometer
		CXP-i		Columbia X-ray Po- larimeter $(i=1,2)$
		XHE	\mathbf{V}	X-ray Heliometer
		WSXE	Y	Wisconsin Soft X-ray Experiment
		GCXSE	DET-X	Goddard Cosmic X-ray Spectrometer Experiment; Detector module $(X=A, B \text{ or } C)$
		HECXE		High-energy celestial X-ray Experiment
		EUV		Extreme UV experi- ment
Röntgen Satellite	ROSAT	XRT		X-ray Telescope
	2	HRI^{a}		High Resolution Im- ager
		$PSPCx^a$		Position Sensitive Proportional Counter (x=B,C flown)
		WFC^c		Wide Field Camera

 a Focal plane Instrument

^bOptical path might include a grating; see Table 2.3 ^cOptical path might include a filter; see Table 3

Observatory Name	TELESCOP	INSTRUME	DETNAM	Comments
Rossi X-ray Timing Explorer	XTE, RXTE	ASM		All-sky monitor
		HEXTE	PWai	The High Energy X- ray Timing Experi- ment; Phoswich Detec- tor Identifier ($a = A,B$; i = 0,1,2,3)
		PCA	PCUi	Proportional Counter Array; Propor- tional Counter Unit (i = 0, 1, 2, 3, 4)
SmallAstronomySatellite#2	SAS-2, SAS-B	SC		Spark Chamber
		PC		Proportional Counter
Small Astronomy Satellite #3	SAS-3, SAS-C	XRT-i		X-ray Telescope i of LED experiment $(i = 1, 2)$
		LED-i ^a		Low Energy Detector i (i = 1, 2)
		RMC		Rotating Modulation Collimator experiment
		SCD-i XX		Slat Collimator Detector i , layer XX , $(i = 1, 2, XX = AR, XE)$

^aFocal plane Instrument

^bOptical path might include a grating; see Table 2.3

^cOptical path might include a filter; see Table 3

Observatory Name	TELESCOP	INSTRUME	DETNAM	Comments
Suzaku	SUZAKU,	HXD	WELL-GSO	Hard X-ray Detector
	Astro-E2			
			WELL-PIN	
			WAM-ANTI	
		XISN		X-ray Imaging Spec-
				trometer; $N=0,1,2$, or
				3
		XRS^{c}	PIXNN	X-ray Spectrometer;
		АЦО	1 1/1/1/	NN=00,01,02,31
				1/1/ =00,01,02,
		XRT, XRT- a		X-ray Telescope; a
				is either "I" or "S"
				for imaging or spec-
				troscopy detectors, re-
				spectively.
Swift	SWIFT	BAT		Burst Alert Telescope
		$\mathrm{UVOTA}^{b,c}$		Ultraviolet & Optical
				Telescope
		\mathbf{SC}		General Spacecraft in-
				formation
		VDT		V DI
VI FD		XRT		X-ray Telescope
Vela 5B	VELA 5B	XC		Vela=watchman in
				Spanish; All-sky
				monitor

^{*a*}Focal plane Instrument

^bOptical path might include a grating; see Table 2.3 ^cOptical path might include a filter; see Table 3

		()	
Observatory Name	TELESCOP	INSTRUME	DETNAM	Comments
XMM-Newton	XMM	$ ext{EMOS}n^{a,b,c}$		European Photon
				Imaging Camera
				(EPIC): Metal-Oxide-
				Silicon CCD; $n = 1, 2$
		$\mathrm{EPN}^{a,b,c}$		EPIC: PN
		$\mathrm{OM}^{a,b,c}$		Optical Monitor
		RGS^{c}	RGA	Reflection Grating
				Spectrometer; Reflec-
			RFC^{b}	tion Grating Assembly RGS Focal Camera
	1		RFC*	RG5 Focal Camera
^a Focal plane Instrume		TT 11 0.0		
^{b} Optical path might in				
^c Optical path might in	nciude a filter; see	Table 3		

20

2.2 Standard Values for Instrument Filters

TELESCOP	INSTRUME	DETNAM	Filter	Comments
Any	Any	Any	(blank)	No filter in use; similar if FILTER keyword
U U	Ū	U U	· · ·	missing from file
Any	Any	NONE, OPEN	4	Filter in open position
Chandra	ACIS	ACIS-n	UVIS_ACISI	n=0,1,29
			UVIS_ACISS	
		HRC-I	UVIS_HRCI	
EINSTEIN	(f.plane inst)		AL	(BBFS) Aluminium
			BE	(BBFS) Beryllium
EXOSAT	LEIT		CLOSED	Totally opaque filter (FW Pos 1)
			PPL	Polypropylene (FW Pos 2)
			4Lx	Thick (400 nm) Lexan (FW Pos 3)
			Fe Cal	Fe^{55} source (FW Pos 5)
			Al/P	Aluminium-parylene (FW Pos 6)
			3Lx	Thin (300 nm) Lexan (FW Pos 7)
			Bor	Boron (FW Pos 8)
			UV	Magnesium Fluoride (FW Pos 9)
ROSAT	PSPC		BORON	Boron filter
	WFC		S1x	C/Lexan/Bor Survey filter $(x=a,b)$
			S2x	Be/Lexan Survey filter $(x=a,b)$
			P1	Al/Lexan Pointed phase filter
			P2	Sn/Al Pointed phase filter
SAS-3	LED		BORON	Boron
0110-0			CHROMIUM	Chromium
			GOLD	Gold (Foils)
			RED_AP	Reduced Aperture filter wheel position
				reduced aperture much wheel position

Table 3: OGIP Standard Strings for Instrument Filters

TELESCOP	INSTRUME	DETNAM	Filter	Comments
XMM	$\mathrm{EMOS}n$		Thin	n = 1, 2
			Medium	
			Thick	
	EPN		Thin	
			Medium	
			Thick	
	RGS		Thin	
			Medium	
			Thick	
	OM		U	
			В	
			V	
			UVW2	
			UVM2	
			UVW1	

OGIP Memo OGIP/93-013 (Missions, Instruments, Filters, Detectors & Gratings)

2.3 Standard Values for Gratings

Table 4: Summary of Standard Strings for Gratings used within the OGIP

TELESCOP	INSTRUME	GRATING	Notes
ANY	ANY	NONE	No grating used
Chandra	Any focal plane instrument	HETG	High Energy Transmission Grating
		LETG	Low Energy Transmission Grating
EINSTEIN	Any focal plane instrument	$\mathrm{OGS}/\mathrm{G}j$	Objective Grating Spectrometer $(j = 5,10)$
			(used with HRI- i in the focal plane)
EXOSAT	LEIT	$\mathrm{TGS}i$	Transmission Grating Spectrometer $(i = 1,2)$
			(used with $CMAi$ in f.plane)

23

ACKNOWLEDGMENTS

We thank the numerous people both inside and outside the OGIP who have contributed suggestions & comments to this document. In particular we thank Jonathan McDowell (CfA) for sharing his great knowledge of previous missions. Jonathan's Space Report is an excellent resource on past and current space missions.
