

cifinsert

April 16, 2023

Abstract

Insert CCF constituents in an existing Calibration Index File.

1 Instruments/Modes

Instrument	Mode
n/a	n/a

2 Use

pipeline processing	no
interactive analysis	yes

3 Description

cifinsert adds CCF constituents to an existing Calibration Index File.

The Calibration Index File can be generated with **cifbuild**.

If the Calibration Index File already contains an entry corresponding to the calibration type and scope of one of the CCF constituents to be added (**sets**), a warning is issued by the **cifbuild** library. The affected CCF constituent is not added to the Calibration Index File. See **cifremove** to delete an entry from a Calibration Index File.

4 Parameters

This section documents the parameters recognized by this task (if any).

Parameter	Mand	Type	Default	Constraints
-----------	------	------	---------	-------------

calindexset	yes	e	ccf.cif	
--------------------	-----	---	---------	--

Name of the calibration index set to be edited.

sets	no	E		
-------------	----	---	--	--

CCF constituents to insert in the Calibration Index Set.

5 Errors

This section documents warnings and errors generated by this task (if any). Note that warnings and errors can also be generated in the SAS infrastructure libraries, in which case they would not be documented here. Refer to the index of all errors and warnings available in the HTML version of the SAS documentation.

none.

6 Input Files

1. A Calibration Index Files, as created by **cifbuild**.
2. Any number of CCF constituents [1].

7 Output Files

1. The input Calibration Index File, appropriately modified.

8 Algorithm

```
cif=parameter(calindexset)
foreach( set in parameter(sets))
  cif.insert(set)
end
```

9 Comments

- The task makes use of the **cifbuild** task library. Errors and warnings generated by **cifinsert** not documented in here should be looked up in **cifbuild**.
