Abstract

RGS light curve correction task

1 Instruments/Modes

Instrument	Mode	
		_
2 Use		
pipeline processing	no	
interactive analysis	yes	

3 Description

rgslccorr is the task that allows the user to create RGS lightcurves. The task corrects the lightcurve from:

- Dead time.
- Background scale.
- Background substraction.

This task needs as mandatory input parameters a RGS event list, the corresponding RGS source list and a timebinsize. It is also possible to create a lightcurve of the two intruments(RGS1+RGS2), if the two events list belong to the same observation and the two instrument exposure were taken simultaneously.

rgslccorr filters the event list file using the source and background region from the source list file and wavelength range or selects a range of CCDs, in case they were enabled. Then, it creates a time serie, corrects for dead time, exposure and backscal. Finally, the source time serie is background subtracted if the user activates the corresponding parameter.

XMM-Newton Science Analysis System

Page: 2

If background subtraction option is enabled, **rgslccorr** task creates an independent background light curve file and also created two columns BACKV and BACKE (background rates and errors) in the background corrected light curve.

4 Parameters

evlist yes list 1-2 GGS event file list. srclist yes list 1-2 GGS source list file. timebinsize yes 1 real > 0 Size of time bins. outputsrcfilename no string src_rates.ds output file name. withbkgsubtraction no bool no onable background subtraction outputbkgfilename no string bkg_rates.ds ackground output file name. withfiltering no bool no onable wavelength filtering for time serie extraction filtering no string "wavelength" "wavelength" "energy arameter to choose to use either wavelength or energy to filter the event list lambdamin no real 0 Mavelength min value	Parameter	Mand	Type	Default	Constraints
RGS event file list. srclist

timemax no time

Stop time for time series

orders	no	list	1 2	1-2

RGS orders to be used in the selection expression

sourceid	no	int	1	

Source identifier that appears in the source list file.

5 Errors

This section documents warnings and errors generated by this task (if any). Note that warnings and errors can also be generated in the SAS infrastructure libraries, in which case they would not be documented here. Refer to the index of all errors and warnings available in the HTML version of the SAS documentation.

BinsizeVal (error)

The value of the bin size must be an integer.

Page: 4

WrongInputFiles (error)

The number of RGS event files and RGS source list must be the same.

EventListSize (error)

The number of RGS event files must be one or two.

WrongObservation (error)

It is not possible to create a lightcurve of two event files from different observations.

NotOverlappingTime (error)

The two RGS event list do not overlap in time.

BinningError (error)

Error calculating the number of bins. Check the start time and stop time.

GTI&EXPOSU Inconsistency (error)

The number of rows in the STDGTI and EXPOSU extensions are not equal. This should not happen. The cause of this problem is a JUMP in the frame counter in the AUX and SPE files. Please contact XMM-Newton SOC

NoFilteredEvents (warning)

One of the CCD does not have any event. corrective action:

6 Input Files

- 1. RGS event list file.
- 2. RGS source list file.

7 Output Files

1. Lightcurve file.
