

dspurify

June 2, 2019

Abstract

Purify a dataset This task is part of the daltools package

1 Instruments/Modes

Instrument	Mode
------------	------

2 Use

3 Description

Purify a dataset.

This task removes non-compliant dal data from a dataset.

e.g. X columns (the DAL is unable to read datasets containing X columns) will be removed from a dataset.

An optional dataset can be specified to which the 'clean' dataset will be written, otherwise the original dataset is modified.

4 Parameters

This section documents the parameters recognized by this task (if any).

Parameter	Mand	Type	Default	Constraints
outset	no	String		

Name of the result dataset

set	yes	String		
------------	-----	--------	--	--

Name of the dataset to be purified

5 Errors

This section documents warnings and errors generated by this task (if any). Note that warnings and errors can also be generated in the SAS infrastructure libraries, in which case they would not be documented here. Refer to the index of all errors and warnings available in the HTML version of the SAS documentation.
