Abstract

This is the core Python Package for SAS. It includes a set of modules which are aimed to be used by all other SAS Python based packages. As of this version, these modules are: `sastask`, `param`, `parser`, `runtask` and `error`.

In the following sections we will describe these components and how they can be used to build up any Python packages in SAS.

1 Use

pipeline processing	no
interactive analysis	yes

2 Description

3 Comments
