

## timecalc

June 2, 2019

**Abstract**

Add and subtract times and intervals.

**1 Instruments/Modes**

Instrument	Mode
n/a	n/a

**2 Use**

pipeline processing	no
interactive analysis	yes

**3 Description**

TIMECALC will calculate the number of seconds between two time intervals, or add a number of seconds to a given time.

**4 Parameters**

This section documents the parameters recognized by this task (if any).

Parameter	Mand	Type	Default	Constraints
-----------	------	------	---------	-------------

<b>t0</b>	yes	string		
-----------	-----	--------	--	--

Starting time, e.g. 1998-11-25T17:21:00.

<b>arg</b>	no	string	dt	dt—t1
------------	----	--------	----	-------

determines the second argument. If 'dt', the time 'dt' will be added to t0 and the result is printed. If 't1', the difference between t0 and t1 is printed.

<b>dt</b>	no	real		
-----------	----	------	--	--

time interval, possibly negative, in seconds.

<b>t1</b>	no	string		
-----------	----	--------	--	--

end time, e.g. 2000-01-01T00:00:00

## 5 Errors

This section documents warnings and errors generated by this task (if any). Note that warnings and errors can also be generated in the SAS infrastructure libraries, in which case they would not be documented here. Refer to the index of all errors and warnings available in the HTML version of the SAS documentation.

## 6 Input Files

## 7 Output Files

## 8 Algorithm

```
if (arg == dt)
    print t0 + dt
else
    print t1 - t0
```
